

Orixcom Services

- Orixcom Data Communications:
 - IP Transit, IP Peering, Direct Internet Access (DIA)
 - Global Ethernet, MPLS
 - Global SDH, Ethernet over SDH
 - WAN as a service (global managed VPN)
- Orixcom Managed Services:
 - Router, Load Balancer
 - Firewall, IPSEC
 - Threat Prevention (DDOS/IPS)
 - WAN Acceleration
 - Dedicated Servers, Server Hosting
 - Colocation
 - Managed Storage
 - Disaster Recovery, Replication
 - Storage Array Network (SAN), Network Attached Storage (NAS)
 - Hardware Procurement, Shipment and Installation
- Orixcom Cloud Services:
 - Public Cloud: Infrastructure as a Service (IaaS), Virtual Private Servers (VPS), Virtual Machines (VMs)
 - Platform as a Service (PaaS): Virtual Firewall, Virtual Load Balancer
 - Private Cloud
 - Web Hosting

Global Connect

Full end-to-end Ethernet services (speeds of 1M-10G) from all major cities worldwide delivered to Middle East data centres, including all the international, national, backhaul and cross connects - either to a customer's equipment rack or onto our VPoP to extend carrier presence in the region.

Virtual Point of Presence (VPoP)

We provide a solution for carriers wanting to establish and announce a local Point of Presence (network node) in the Middle East, giving customers with a flexible and low risk option that enables a fast expansion of services that integrate easily with existing networks. Customers can introduce and scale services in the Middle East without the major risk of heavy capex investment to create a physical presence overseas.

UAE-IX Connect

As a partner of UAE-IX we offer cost efficient peering services for customers with sub-rate traffic levels starting at 100Mb so they can easily expand their networks in a very cost effective way. This provides customers with a simple one-stop shop solution of access to the largest peering platform in the Middle East and increased IP quality.

Dedicated Internet Access (DIA)

We offer dedicated Internet connections suitable for any business need. Services are available with multiple configuration options. A solution for many applications including access to IPsec VPNs, website connectivity to the Internet and management of collocated equipment. We provide customers with IP addresses or customers can provide their own, IP addresses may be routed either statically or via BGP.

IP Transit

We offer best-in-region IP Transit for customers who want to provide global Internet access. A cost-effective alternative solution to building your own global network and relying on peering agreements. Connect your AS network to our international IP backbone ([AS60924](#)) and we will provide your customers with Internet access.

WANaaS

We offer a global connectivity service designed and based around the latest WAN Acceleration technology that provides bandwidth scaling, requires zero-capex and runs over existing broadband local access services. It provides customers with a cost-efficient, diverse and redundant service for worldwide enterprise-grade connectivity and is delivered as a monthly subscription.

Rack Space

We offer rack space on a quarter rack, half rack or full rack basis in Equinix DX1 and DX2 in the UAE.

Local Presence

Our highly skilled staff can act for you eliminating the need for your own on-the-ground resources. We provide a complete local Hands & Eyes service giving you confidence that your infrastructure is safe and taken care of professionally.

Managed Hardware Procurement

We provide equipment purchase, shipment and installation services – removing procurement and logistical headaches for international customers looking to deploy their hardware in the Middle East.

Managed Storage

We offer on-demand SAN and NAS enterprise-class storage from our UAE data centres and on-premise. This provides private storage arrays (VPSA) with dedicated controller, drives, CPUs, memory and I/O. Whether in our data centres or the customer location, it's a simple Pay as you Use commercial model, allowing customers to scale your storage requirements without limits, without CAPEX and without you having to manage hardware expansion or upgrades. Available with a 100% availability guarantee, backed up by our SLA.

Managed Business Continuity

We provide a portfolio of off-site, out-of-country and onsite data protection systems for Business Continuity requirements that ensure compliance with UAE information assurance guidelines. As well as assessments and advice, we provide virtual machines, managed storage arrays, data backups and replication working with industry leading replication and backup software vendors.

Managed Security

Regardless of existing investments in security, there are constant threats, attacks and penetrations of your networks. We provide a suite of firewall services to minimise these risks. In addition we partner with ThreatSTOP to offer a solution that stops botnet and malware traffic into and from your networks. This world-class solution prevents these threats along with Zero-Day attacks and enhances your existing security architecture.

Managed Networks

We offer comprehensive and bespoke managed services that address all matters related to the setup and operation of highly efficient networks, including planning through to network maintenance and network security services. Whatever the complexity of your requirements, we can provide a single source of expertise and experience. From deploying high quality LAN, WAN or IPSEC environments, we offer the levels of performance your business expects.

Orixcom Cloud

IaaS

We offer IaaS services from our public cloud which provides flexible, on-demand computing power for customers to scale and meet their business requirements. Built on a platform that is hypervisor and geographically agnostic we provide Infrastructure as a Service (IaaS), Virtual Private Servers (VPS), Virtual Machines (VMs), Platform as a Service (PaaS), Virtual Firewall and Virtual Load Balancer. It provides customers with the capabilities to run applications, test environments and databases. Additionally we offer hybrid and private cloud services with full platform orchestration capability.

Hosting

We offer comprehensive and bespoke hosting services that provides powerful, scalable and reliable hosting based on clustered load-balanced servers with firewalls and utility billing.

STaaS

We offer on-demand enterprise-class NAS and SAN storage from our UAE data centres that provides virtual private storage arrays (VPSA) for customers with their own dedicated controller, drives, CPUs, memory and I/O. The service is billed on a Pay as you Use model, allowing customers to scale storage requirements without limits, without CAPEX and without you having to manage hardware expansion or upgrades. Available with a 100% availability guarantee, backed up by a SLA.
